THE PRACTICES OF LEVERAGE AND ENGAGING IN FINANCE TRANSACTIONS, CAN, IN CERTAIN CIRCUMSTANCES, INCREASE THE ADVERSE IMPACT TO WHICH THE FUND'S INVESTMENT PORTFOLIO MAY BE SUBJECT. Pricing

The calculation of the NAV of the Sub-Fund shall be effected by the Administrator at such intervals and on each Valuation Day and in such manner as is stated in the Offering Memorandum.

Commodities Risk

Commodity prices generally relate to the overall level of economic activity and industrial production. Historically, during periods of economic or financial instability, commodities and the securities of producers have been subject to extreme fluctuations in market price. The earnings and general financial conditions of producers are highly dependent on the market price of the underlying resources which, historically, have been extremely volatile. Natural disasters, such as earthquakes, droughts and floods, can lead to severe supply disruptions. These events may significantly influence prices of commodities and prices of natural resource equities.

Similarly, supply interruptions as a result of social factors such as strikes and civil unrest can have a material impact on commodity prices. The production of some commodities can be concentrated in geographic regions or specific countries, and as such the impact of natural, political or social factors can have a significant effect. Commodity prices can be influenced, often unpredictably, by co-operative or co-ordinated actions, by producers or sovereign nations (e.g. OPEC members). The discovery of a significant mineral deposit could have a major adverse impact on the price of the commodity due to the prospect of increased supply. New technology could lead to substitution of a commodity or commodities, thereby reducing demand. Similarly, new technology could lower production costs and increase supply of a commodity, influencing its price.
